

Maxxeus Dental biologics provide safe and high quality options for the best clinical outcome. With decades of expertise in providing biologics to the dental market, we understand the needs of the implanting clinician. Because we focus exclusively on biologics, Maxxeus Dental can provide our customers and their patients the best regenerative biologics options available as innovative technologies develop and techniques evolve.

AlloBind PARTICULATES

AlloBind particulates offers the convenience of particulates with the ease of a putty. AlloBind particulates are packaged as a freeze-dried powder that, once rehydrated, handles like a world class putty. Unlike a putty, AlloBind gives the clinician the flexibility to obtain the desired graft fluidity.

- Comprised of 100% allograft tissue
- No synthetic or animal derived fillers or carriers
- Each lot verified for osteoinductivity

LAMINAR BONE

Laminar Bone Membranes are rigid membranes that are well suitable for procedures where space maintenance/creation is required.

- Made from thin sheets of cortical bone
- No need for fixation screws or tacks
- Osteoinductive
- Packaged in saline, reconstitution not required

DBM FIBERS

DBM Cortical Fibers provides a graft mixture of 100% demineralized cortical bone fibers and demineralized bone powder which provide an optimum graft mixture that can be added to a wide array of graft types.

- No synthetic carriers or fillers
- Provides osteoinductive and osteoconductive properties as a bone void filler
